

BIOGRAPHICAL SKETCH

Provide the following information for the Senior/key personnel and other significant contributors in the order listed on Form Page 2.
Follow this format for each person. **DO NOT EXCEED FOUR PAGES.**

NAME Peter B. Barker	POSITION TITLE Professor of Radiology and Oncology		
eRA COMMONS USER NAME (credential, e.g., agency login) pbbark			
EDUCATION/TRAINING <i>(Begin with baccalaureate or other initial professional education, such as nursing, include postdoctoral training and residency training if applicable.)</i>			
INSTITUTION AND LOCATION	DEGREE <i>(if applicable)</i>	MM/YY	FIELD OF STUDY
Oxford University	B.A.	06/82	Chemistry
Oxford University	D. Phil.	06/86	Physical Chemistry
Huntington Medical Research Institute, California	Post-doc	1989	<i>In vivo</i> MRS and MRI

A. Personal Statement

I have approximately twenty eight years of experience in performing research, including twenty one years with MRI and MRS in human subjects. I am dedicated to the success of the ICMIC program and in particular will continue to provide leadership in the career development component. In addition, I will work with Drs. van Zijl and Artemov in Research Component 3 on the Development of Novel MRI Contrast Mechanisms in Human Breast Imaging, which I believe has enormous potential for the non-invasive diagnosis and characterization of abnormal breast lesions.

B. Positions and Honors

Positions and Employment

1978	Open Scholarship in Chemistry, Balliol College, Oxford University, U.K.
1982	Greville-Smith Prize in Chemistry, Oxford University, U.K.
1982	Canadian Rhodes Scholars Foundation Scholarship, University of British Columbia, Vancouver, Canada
1983	Research Studentship, UK Science and Engineering Research Council
1986	Boswell Research Fellowship, California Institute of Technology
1988-89	Research Scientist, Huntington Medical Research Institutes, Pasadena, CA Visiting Associate, Division of Chemistry and Chemical Engineering, California Institute of Technology, Pasadena, CA
1989-94	Assistant Professor of Radiology, Division of NMR Research, Johns Hopkins University School of Medicine, Baltimore, MD
1994-97	Senior Bioscientific Staff, Department of Neurology, Henry Ford Hospital, Detroit, MI
1995	Editors Recognition Award for Distinction in Reviewing, Radiology
1996	American Heart Association Established Investigator Award
1995-97	Adjunct Associate Professor of Medical Physics, Oakland University, Rochester, MI
1997-02	Associate Professor of Radiology, Division of Neuroradiology, Johns Hopkins University School of Medicine, Baltimore, MD
1998	Research Scientist, Kennedy Krieger Institute, Baltimore, MD
2002	Professor of Radiology, Johns Hopkins University School of Medicine, Baltimore, MD
2005	Professor of Oncology, Johns Hopkins University School of Medicine, Baltimore, MD
2007	Member, AHA Brain I Peer Review Committee
2007	Outstanding teacher award, weekend educational course, ISMRM/ESMRMB 2007
2008	Charter Member, MEDI Study Section, NIH
2008	Program Advisory Committee, Specialized Neuroscience Research Program, NINDS

C. Selected Peer-reviewed Publications

D. Research Support

Ongoing Research Support

NCI 2P50CA103175 (Bhujwalla)

09/22/11 - 07/31/16

JHU ICMIC Program

This center grant funds an *In vivo* Cellular and Molecular Imaging Center at Johns Hopkins. The program consists of four research components, four developmental projects, one career development award and four resources.

1R01EB009731 (Zhou)

07/01/09-06/30/14

NIBIB

Amide Proton Transfer (APT) MRI of Brain Tumors at 3T and 7T

The overall goal is to develop the new amide proton transfer (APT)-MRI methodology for more easy use in the clinic and to assess the capability and meaning of APT imaging for diagnosing heterogeneous aspects of gliomas.

5R01NS047691 (Hillis) 07/01/04-06/30/14

NINDS

Neural Basis of Empathy and Prosody

The major goals of this project are to identify the neural substrates of unilateral spatial neglect in hyperacute stroke patients with regions of brain dysfunction and damage identified by diffusion weighted imaging and perfusion weighted imaging.

2R01EB000822 (Maudsley) 07/01/08-06/30/13

NIBIB

Partnership for MR Spectroscopic Imaging Data Processing

The major goal of this project is to establish a standardized, cross-vendor data acquisition and analysis protocol for MR spectroscopic imaging of the brain.

1R01CA125258 (Barker) 08/08/07-07/31/12

NCI

Proton MRSI of Human Breast Cancer at 3 and 7 Tesla

The major goal of this project is to develop high field *in vivo* MRSI techniques for the diagnosis of breast cancer, and to evaluate their sensitivity and specificity.

5R01EY001849 (Zee) 10/01/07-09/30/12

NEI

Oculomotor Disorders - Clinical and Experimental Study

The goal of this project is to learn about the mechanisms of normal eye movement control and human ocular motor disorders using magnetic resonance imaging.

Completed Projects Within Last Three Years

5R01DC005375 (Hillis) 07/01/07-06/30/12

NIDCD

Neural Bases of Language and Cognitive Deficits in Acute Stroke and Recovery

The major goals of this project are to identify the neural substrates of lexical and semantic representations of nouns and verbs, by correlating specific language impairments in hyperacute stroke patients with regions of brain dysfunction and damage identified by diffusion weighted imaging and perfusion weighted imaging.

5P41RR15241 (van Zijl) 09/24/09-08/31/11

NCRR

Supplement to demonstrate the clinical feasibility of the 7T scanner through the implementation of novel technology and application to two disorders, namely multiple sclerosis and Alzheimer's disease.

1P41RR15241 (van Zijl) 07/01/06-06/30/11

NCRR

Resource for Quantitative Functional MRI

The major goal is to provide state-of-the-art MRI and MRS data acquisition and image processing technology and unique MR expertise to facilitate the biomedical research of NIH-funded neuroscientists at several institutions in Maryland and throughout the USA.

NCI P50CA103175-05S1 (Bhujwala) 08/01/03-07/31/11 NCE

JHU ICMIC Program

This center grant funds an *in vivo* Cellular and Molecular Imaging Center at Johns Hopkins. The program consists of four research components, developmental projects, career development awards and five resources.

1R21MH082322 (Barker) 12/01/08-11/30/10
NIMH
In vivo Determination of NAAG in Brain
The major goal of this project is to develop methods for measuring NAAG in the human brain on 3T and 7T MR scanners, and to apply these techniques to a pilot study of schizophrenia.

5R01MH071150 (Sacktor) 04/08/05-03/31/10
NIMH
Oxidative Stress Markers and HIV Dementia
The goal of this project is to study the role of oxidative stress in HIV dementia.

5P01AG021190 (Earley) 06/15/04-05/31/09
NINDS
Restless Legs Syndrome- The Iron-Dopamine Connection
The major goal of this project is to investigate the connection between brain iron and dopamine levels in Restless Leg Syndrome.

5R01CA100184 (Jacobs) 08/26/04-04/30/08
NCI
Multiparametric MRI characterization of breast tissue
The major goal of this project is to investigate multi-parametric MRI for the diagnosis of breast cancer.

2R01HL056882 (Bottomley) 04/01/03-03/31/08
NHLBI
MR studies of Myocardial Creatine Kinase Metabolism
The goal of this project is to develop MR spectroscopy methods for the study of myocardial creatine kinase metabolism.
